PROFESSIONAL SUMMARY

Full-stack engineer and engineering lead, building professionally since 2020, who takes products from spec to production across web, mobile and backend. As Engineering Lead at Home Grid and CvtoCareer, I led small teams, owned code review and shipped multi-tenant SaaS for US and Australian companies; at Spurt I built OAuth single sign-on that moved 35,325 users across four products and cut releases from 30 minutes to under 5. I work mainly in TypeScript, NestJS, PostgreSQL/Supabase, Next.js and React Native, integrate payments (Stripe, Flutterwave, Plaid) and LLMs (Claude, Gemini) with production guardrails, and use AI coding agents in a spec-first, review-gated workflow.

WORK EXPERIENCE

Fullstack Developer & Engineering Lead

2025 - Present · Full-time

Home Grid (Texas, USA)

- Led a team of 3 full-stack engineers across Home Grid, a multi-tenant healthcare-operations PWA (React/Vite, NestJS 11, Supabase Postgres), and its sister marketplace CareMatch; 14 organizations onboarded (10 active, 5 on paid plans); top contributor in both repos and reviewer of the team's pull requests (all 112 on CareMatch).
- Architected a compliance-grade document vault with PDF templates and e-signatures (pdf-lib), per-document audit trails, and time-boxed external auditor access with MFA, view-only and watermark rules, revoked automatically every night.
- Built AI-assisted staff scheduling on Gemini 2.5 Flash that encodes working-hour, rest-period, location and job-role rules, runs as a background job with timeouts, and routes every result through manager review, cutting schedule creation from about a day to 20 minutes; paired with geofenced clock-in and a live attendance feed.
- Designed layered access control (Supabase JWT guard → role guard → 40+ per-module permission flags) and four-tier Stripe subscription entitlements, enforced on both the API and the client.
- Set up the GitHub Actions CI/CD pipeline shipping Dockerized staging and production builds to AWS EC2, plus about a dozen scheduled jobs for billing, expiry tracking, reminders and Google Calendar sync.
- Built CareMatch, a Texas child-welfare hiring marketplace (NestJS, Next.js, PostgreSQL) now used by 10 facilities with 20 job posts, including Stripe Checkout fees for each job posting with idempotent webhook publishing, automatic takedown on refund, scheduled expiry and PDF receipts.
- Integrated CareMatch as a paid Home Grid add-on using single-use, 60-second SSO tokens and HMAC-signed entitlement webhooks, and routed both products' events through Home Grid's single Stripe webhook.

Backend & Infrastructure Engineer

2024 - 2026 · Full-time

Spurt (USA, remote)

- Built the OAuth 2.0 single sign-on endpoints in the NestJS/Prisma SpurtX core, with Google and Microsoft sign-in, used by four products (Sync, Score, Toolkit and the SpurtX hub), and migrated 35,325 legacy users onto it.
- Owned the Sync backend (NestJS, PostgreSQL), used by 10+ teams across 50+ projects, from late 2024, writing about 88% of its commits: AI task generation with Gemini, Stripe subscriptions, Fincra wallets, Google and Outlook Calendar sync, and a 39-event notification catalog across email, push and WhatsApp.

- Founded Score, the NestJS successor to Spurt's PHP product Core, now serving 10+ businesses, and was its only engineer for six months, building invoicing, client OTP verification, bookings with Google Calendar and Meet, and cron-driven recurring invoices on dual Postgres connections shared with the SpurtX SSO.
- Built a MongoDB-backed analytics warehouse with scheduled rollups for active users, churn, cohort retention, time to first value, feature adoption and NPS, feeding the admin dashboard.
- Secured the platform: fixed Sync's penetration-test findings, tied admin APIs in four services to a central permission matrix with a global guard that refuses unchecked routes and automatic audit logs, and added rate-limited emailed 2FA for admins backed by Redis.
- Owned Docker and GitHub Actions deploys to AWS (EC2, ECR/ECS with commit-tagged images) across the SpurtX services, cutting releases from ~30-minute manual deploys to under 5 minutes, plus Grafana Loki logging that never blocks requests and the company's logging policy.

Engineering Lead (promoted from Automation & Web Scraping Engineer)

2023 - 2025 · Part-time

CvtoCareer (Sydney, Australia)

- Joined as an Automation & Web Scraping Engineer and was promoted to Engineering Lead of a 5–10 person team of engineers, designers and QA, leading the move of the CvtoCareer web platform from a monolith to micro-frontends (Next.js, Material UI, Vercel).
- Built and maintained 7+ job-application automation engines submitting about 200 applications per client each week across LinkedIn, Indeed, SEEK and Jobserve (Python, Selenium, Playwright, Puppeteer).
- Added AI question extraction and answering to the application engines, and Gemini-powered resume enhancement to the web app.
- Built scraping pipelines aggregating 50,000+ job postings a week, with async Python workers coordinated through Redis, Flask APIs serving the data, and Docker deployments on DigitalOcean.

Frontend Engineer

2023 - 2025 · Full-time

Zedi Inc (Lagos, Nigeria)

- Led the v2 rebuild of GrowthStack, Zedi's marketing-services platform serving 5+ client businesses (React, TypeScript, Redux Toolkit), moving the client dashboard to a new backend API and rebuilding auth, onboarding, ordering across 15 service types, Flutterwave checkout and in-app review of image, video and PDF deliverables.
- Built GrowthStack's role-based staff portal for superadmins, admins and creative talents, covering task assignment and reassignment, talent submissions uploaded to Cloudinary, and a two-stage admin-then-client approval flow.
- Built the studio-owner side of Scrollz, a Next.js and TypeScript music-industry platform with 5+ studios listed, in a Turborepo monorepo: studio listing and editing, the booking lifecycle (accept or decline, check-in and check-out, reviews and reports) and a bookings analytics dashboard, with TanStack Query, Zustand and Zod.
- Built the Next.js frontend and Strapi CMS (PostgreSQL, Cloudinary) for Arcpenter, an interior design company, with 7 content models so the client can publish projects, services and articles without developer help.
- Built the TruQ logistics website (23 routes, CMS-driven blog, full redesign) and the Zedi AI marketing and demo-booking site solo, and contributed pages to the Zedi Africa and ZedFlo agency websites.

REACT NEXT.JS TYPESCRIPT JAVASCRIPT REDUX TOOLKIT TANSTACK QUERY ZUSTAND TAILWIND CSS STRAPI TURBOREPO FLUTTERWAVE CLOUDINARY

Backend Engineer

2021 - 2022

Trusted Partners (Riyadh, Saudi Arabia)

- Built REST APIs with Django and Flask for client web applications.

Full Stack Developer & Tutor

2020 - 2022

The Roothub (Uyo, Nigeria)

- Mentored 50+ students to professional proficiency by designing and delivering a comprehensive Full Stack JavaScript curriculum.

CONTRACT WORK

Frontend & Mobile Engineer

Bucks (Lagos, Nigeria)

- Shipped live goal savings in the Bucks React Native app (React Query, idempotency-keyed withdrawals) and built the locked and group savings flows ahead of their APIs.

Full Stack Engineer

Nouvells (London, United Kingdom)

- Built the admin console and company job management for an AI-vetted talent marketplace on Next.js Server Actions and Supabase with Row Level Security.

Full Stack Engineer

Me&You Technologies (Calabar, Nigeria)

- Built Me&u, a couples app, end to end in 8 weeks: Expo/React Native client, Supabase backend (30 migrations, RLS), five Edge Functions, a streaming Gemini AI coach and push notifications.

Full Stack Engineer

Church Life Limited (Calabar, Nigeria)

- Built Church Life, a multi-parish Catholic app, end to end in 8 weeks in Expo/React Native on Supabase, with RLS tenancy, Edge Functions for AI Q&A and push, and in-app account deletion.

Full Stack Engineer

Zedbe (United States)

- Built Zedbe, an AI finance app, end to end in 4 weeks: Expo/React Native client and Supabase backend with Plaid webhooks streaming transactions over Realtime, RLS and 11 Edge Functions.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, SQL
Backend:	Node.js, NestJS, Django, Flask, REST APIs, WebSockets, OAuth 2.0 / SSO, Background jobs & queues
Frontend & Mobile:	React, Next.js, React Native, Expo, Tailwind CSS, TanStack Query, Redux Toolkit
Data:	PostgreSQL, Supabase, MongoDB, Redis, Prisma, TypeORM
Cloud & DevOps:	AWS (EC2, ECR/ECS, S3), Docker, GitHub Actions, Vercel, Grafana Loki, Sentry
Payments & AI:	Stripe, Flutterwave, Plaid, Claude API, Gemini API, OpenAI API

EDUCATION

University of Uyo

2017 - 2022

Bachelor of Engineering in Computer Engineering
